Pest Control**

Today's Pesticides

- The chemical industry provides classes of pesticides that are:
 - Less persistent and therefore break down into the environment and require more frequent applications
 - More water soluble and therefore more likely to contaminate surface and ground water
 - Far more toxic – up to 40 times more toxic than DDT

But these pesticides aren't working!

Higher toxic concentrations, more frequent
applications, yet pests are controlled less
than before!

Why?

Pesticide Resistance

Whenever a population of insects is exposed to a pesticide, not all are killed. The survivors are genetically immune to the pesticide and pass that immunity to their offspring which then become a greater percentage of that population. Due to rapid reproduction rates, entire populations become resistant quickly.

The more times a population is exposed to a pesticide, the more quickly resistance develops. Therefore, alternating pesticides creates more resistant pests.

The EPA process to approve pesticides

- The EPA must 'register' all pesticides whose *active* ingredient (the one that controls the pests) is a toxin, carcinogen, poison, neuro-toxin, or any substance KNOWN to harm people, animals or the environment
- A costly and lengthy period of testing is performed by the EPA *at the expense of the chemical company hoping to sell the pesticide*
- No requirements exist for testing or even identifying 'inert' or 'other' ingredients which constantly change due to market conditions and are well documented to be the cause of certain reactions

Exempt Active Ingredients

- Due to the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), the EPA created List 25(B) which shows active ingredients that are proven to be safe for humans, animals and the environment.
- 25(B) products are EXEMPT from EPA registration
- 25(B) products require no applicator's license to apply

Safe, Effective and Proven

Pest Control**

Cedar - Nature's Pest Defense

- Cedar chests, cedar closets – ever see a bug inside?
- Cedar is offensive to pests like ammonia is to humans.
- If exposed, they will do all they can to stay away, if engulfed in fumes, they die.
- Scientists and researchers have tried for decades to harness the power of Cedar but were stumped as there hadn't been a carrier

Developed for U.S. Troops

- The Department of Defense challenged manufacturers of 25(B) products to create a safe and effective product to control the sand flea infestations in the Middle East.
- The Gulf War Syndrome is now directly linked to use of pesticides.

Greenbug Formulation

- 10% Cedar Oil and 90% Silane Fluid (liquid quartz)
- Ready to use
- Do not dilute
- Greenbug for People
- Greenbug for Pets

**All Natural
Pest Control**

- 25(B) exempt from EPA registration
- FDA approved for use “in and around food”
- USDA Bio-Preferred program as the solution of choice for pest control
- Deemed “far superior to any of its chemical counterparts” by Iowa State University
- Repeated lab results of 100% mortality in killing adult pests, juvenile pests and eggs of the next generation
- Repeated lab results of 100% repellency of adult pests

**All Natural
Pest Control**

- Greenbug All Natural Pest Control Products affect all smell-driven or pheromone-driven pests which include mosquitoes, grubs, flies, ants, fleas, gnats, no-see-ums, roaches, chiggers, fire ants, bed bugs, lice, dustmites, thrips, termites, Japanese beetles, etc.
- Pests cannot become resistant as Greenbug is not a pesticide

Environmentally Friendly

- Greenbug All Natural Pest Control Products have no affect whatsoever on beneficial creatures!
- Completely safe for butterflies, honey bees, ladybugs, frogs, toads, amphibians, crustaceans, fish, birds, people, pets, - all the good guys!

All Natural
Pest Control

- Greenbug For People
 - Apply directly on skin and clothing as needed.
- Do not Dilute
- 10% Cedar Oil and 90% Silane Fluid
- Safe on all ages – even newborns

All Natural
Pest Control

- Greenbug For Pets – Initially, apply liberally to fur and work cedar aroma through to the skin.
- Apply thereafter based on exposure to pests
- Do not Dilute
- 10% Cedar Oil and 90% Silane Fluid
- Safe on all animals - even grooming cats*

Greenbug notes:

- * Not for use on exotic birds
- Use caution if you have been diagnosed with a cedar allergy
- Do not ingest
- Avoid contact with eyes
- If irritation develops, flush with water and discontinue use
- Greenbug for People and Greenbug for Pets are not to be used on plant material

Why use Greenbug All Natural Pest Control Products?

**All Natural
Pest Control**

- Because they are safe!
- Because they are effective!
- Because they are proven!

**All Natural
Pest Control**

***For People, Pets,
Indoors and Outdoors***
